

## Clear2there in partnership with Biosign is proud to offer the *Biosign Pulsewave™ Monitor*.

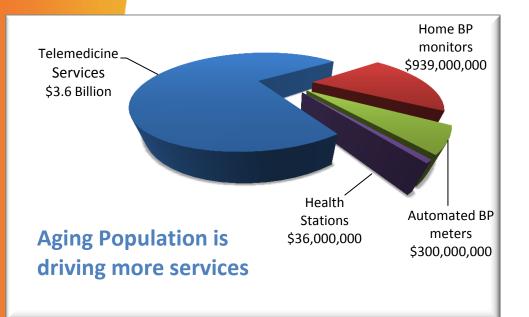

The **Biosign Pulsewave™ Monitor** is an end-to-end solution for non-invasive monitoring, analysis and reporting of health data. The Pulsewave™ cuff painlessly captures the pulse waveform from the radial artery and transmits it to the cloud through a computer and eventually through Viewbiquity. The Biosign algorithms analyze the data in seconds to report blood pressure and other vital sign measurements. Online Pulsewave™ analysis & reporting tools give patients & healthcare providers secure access to real-time & recorded health information.

Our "Virtual" medical instrument

- Can produce multiple measurements from one reading
- Uses server-based, high-capacity computer algorithms
- Produces a precise measurement with confidence intervals
- Is automatically calibrated before every reading
- Identifies errors remotely and permits signal re-testing
